## About Audubon Environmental, Inc

Audubon Environmental works with land owners, investors, and development teams to blend what is right for environment, right for community, and right for business. We share our expertise by offering design and implementation advisory services for development teams, site personnel, and end users. Through direct education and training onsite, we provide the guidelines, set the foundations, and give insight for the best use, management, and protection of resources in green development. Our integrated, comprehensive method for sustaining land, water and life generates revenue by increasing sales, reducing costs, and providing a unique, previously unattainable marketing edge.

The Audubon Environmental team is built around Doctorate and Masters level scientists experienced with master-planned communities, golf courses, resorts, resources management, and applied ecological research. Some of the areas of expertise include: Aquatic Ecology, Ecological Toxicology, Turf Agronomy, Golf Course Management, Landscape Ecology, Wildlife Management, Forestry, Arboriculture, Sustainability Science, and Green Certification.

Our experience and science-based approach to respectful land use has resulted in green developments around the world. With a track record of over 200 projects in 17 countries and 32 US states, and over 20 years of experience implementing sustainability on the ground, Audubon Environmental has a reputation of excellence. We increase our client's profitability and expand their market reach by providing business guidance, innovation and green certification.

## Green certifications

Non-profit and third-party organizations regularly recognize and reward our work through green certifications earned by our client's projects. Our staff contributed directly in pioneering technical guidelines for the award-winning Audubon International Signature program, and we continue to engage and partner with the most reputable certifying organizations in our industry. A primary goal of each client engagement is to help bring global recognition and high-value marketing to projects earning the right to be called green.
